

N-77/

SPRAY GRAPHITE

Colloidal graphite based spray, makes conductive every surface. Leaves a thin silver-grey film that perfectly adheres to plastic, metal, wood, glass, ceramic...etc.

If utilized in coating the housings of measure instruments or delicate electronic machines, N-77 totally eliminates the dangerous electrostatic charges, that often causes damages or non-correct working.

Ideal to restore potentiometers, cathode ray tubes of TV and computer monitors. The graphite film is an excellent dry lubricant, resistant to very high temperatures. It's a good heat dissipator. High coefficient of laser light absorption. Shake well before use.

- OZONE SAFE
- CFC AND HCFC FREE
- DRY LUBRICANT
- STRONGLY ADHERES TO ALL MATERIALS
- HIGH ELECTROCONDUCTIVE PROPERTIES
- NON FLAMMABLE AFTER THE SOLVENT HAS EVAPORATED
