Notes : 1. With I_{fly} = 12 μs and t_l = 29 μs.

2. The TDA8185 may be operated on a 5 V supply directly. A 5.5 V shunt regulator is available internally for operation on higher supply voltage ; in this case an external limiting resistor is required. Without the external limiting resistor care must be taken to ensure that the supply voltage does not exceed 5.5 V or the regulator will intervene and the device could be damaged.
